Eye candy The most common use of Photoshop is to make images look better or more attractive than they might look in print or on screen. You can apply several effects, including the following: * Blur, a digital equivalent of the film-blur effect * Color correction * Color balance: adjusting the color within an image * Color keying: creating a selected part of an image that has a different color * Color replacement: using a computerized way of creating a look that resembles a painting * Distortion: creating a look that resembles optical lens or camera distortion * Gaussian blur: a fuzzy, soft look that gives the appearance of "shaking the image" * Gradient: a mix of two or more colors and which looks as if the image is fading into or fading out of the colors * Gradient overlay: a color gradient that can be overlaid on top of a flat, non-gradient, color * Gradient mapping: as with a gradient overlay, but a gradient set as a map * Light/shadows: making the shadows darker or lighter * Mosaic: a patterned look (creating a paper-like look) * Shadows: softening the shadows, creating the look of a "realistic" image * Sharpening: making an image appear to have been taken with a very sharp camera lens * Spinning: an effect that looks as if the image is falling away from the viewer In this book, we demonstrate a number of ways in which you can distort images and create visually pleasing effects.

Q: Number of people who used my service on a non-special day My website allows users to list what they are working on. The more significant that task the more likely it is to be completed. Currently, users are given a deadline. On a non-special day (i.e. not weekend), how can I calculate the number of people who completed their task before they had a deadline? A: I would suggest that your users log their task (and how long they have been working on it) - you can then provide them with an estimate of how long it will take them based on the number of "unavailable" hours in your system. As an example, if on average 30% of your user's time is unavailable on non-special days, then you will need to factor in 10 hours to account for any work that has not been recorded. If your users are experienced and can reasonably estimate their own time on projects, then this will be a useful resource for them. For example, if an estimate of 10 hours is good enough, then a user who works for five days can expect a 3 hour project to be complete in seven days (5 hours per day). If your users are not experienced, then you may need to contact them to get accurate estimates. Scattering of light by the shadow of a sphere. A mathematical model for the scattering of light by the shadow of a sphere is presented. A model is developed for the case where the illuminated sphere has an opaque exterior that is surrounded by a transparent exterior, and the incident light is parallel to the line joining the centers of the sphere and the shadow. The shadow is modeled as a perfectly absorbing spherical interior region, and the scattering is described by means of an equivalent spherical-aberration description. The scattering is investigated both in the forward and in the backward directions. In the forward direction, the optimal polarizer (defined by the 50% transmission angle) is the polarizer that is aligned parallel to the shadow. Thus, the shadow can be viewed as a broadband polarizer, and the power scattered by the shadow is computed in the forward direction. In the backward direction, the optimal polarizer is described by the equator of the shadow. Thus, the shadow can be viewed as a broadband rotator, and the scattered power in the backward direction is computed.Q: SELECT DISTINCT query in oracle not giving expected results I am trying to find out the number of distinct
