1. The Adobe Photoshop CS3/CS4 toolbars are similar to the older PSD/PS, but Photoshop CS5 and later offer more options. 2. \*\*Photoshop CS2 and CS3:\*\* Depending on which version you have, your Photoshop CS3/CS4 toolbars are the same as the previous versions. If you have any previous versions, you'll see the toolbar menu in the upper-left corner of your screen. 3. \*\*Photoshop CS4:\*\* In CS4, your menus, toolbars, and dialog boxes look very similar to the previous versions. 4. \*\*Photoshop CS5:\*\* Your menus, toolbars, and dialog boxes look very similar to the previous versions. However, when you create a new document, the menu bar displays options such as Edit, View, and the workspace, as shown in Figure 1-1. Figure 1-1: The workspace changes depending on your task. 5. \*\*Photoshop Elements:\*\* You use Elements for photographs, slideshows, and more. Elements can open and manipulate layers and many other images that you find with more editing tools than you can find in Photoshop. You need to pay for Elements, but you get it free in the Student/Teacher edition. You see menus and toolbars similar to Photoshop and Elements when you work with Elements. You see how to work with layers, channels, and other image-editing tools (such as levels and curves) in Chapter 14. 6. \*\*CorelDRAW:\*\* CorelDRAW has been around since the 1990s. It's also a popular illustration program, but you don't necessarily need to know illustration to use it. You can open files in CorelDRAW and apply layers, add colors and effects, and change the size of your images. It offers a few of the same controls as Photoshop (but not as many as Elements). DRAW can be used to create vector images, such as illustrations, and even bitmapped ones. You use some of the same drawing tools in DRAW as you do in Illustrator, although you don't draw with a tool like the pen in Illustrator — you draw with the Direct Selection tool. If you plan on doing a lot of work in a vector-based program, CorelDRAW is worth the investment. 7. \*\*Adobe Flash:\*\* Flash is the latest program from Adobe. It was

Adobe Photoshop Elements is designed for hobbyists, photographers and graphic designers. If you just want to improve your photos or retouching, you can do it with Photoshop Elements. This post looks at the best the Lightroom 6 dark room filter can do when trying to create a RAW file. The Lightroom 6 dark room filter can automatically create a black and white image from RAW files. The editor can change the exposure when you have the photo in raw format, and also you can change the contrast and brightness of the image. The dark room filter can also add a few other effects. You will need to download the Lightroom 6 Dark Room filter from Adobe's website. Once downloaded, you should open the software and select the file you want to edit. Then you should click on the "Lightroom 6" tab, then select the "Dark Room" filter. The Dark room filter will open with a window like this. The "Dark room filter options" screen will open like the one above. You can then select any of the adjustment sliders and check the sliders that you want to apply. For example, you can change the exposure, change the contrast, change the brightness and add a few special effects. This is the "Overlay" effect. You can adjust the exposure, contrast and brightness when this is applied. This is the "Highlights" effect. You can adjust the brightness of the highlights and shadows. This is the "Saturation" effect. You can adjust the amount of saturation and contrast of the image. This is the "Shadow" effect. You can adjust the shadow of the image. This is the "Highlights" effect. You can adjust the balance of the shadows and highlights. This is the "Saturation" effect. You can adjust the amount of saturation and contrast of the image. This is the "Out of focus blur" effect. You can blur any part of the image. This is the "Contrast" effect. You can adjust the brightness or contrast of the image. This is the "Black & white" effect. You can adjust the contrast of the image and then turn it into a black and white image. In Dark Room, you can turn it 388ed7b0c7

Q: Get reference to HtmlGenericControl I have a custom control that I'm trying to add to a web page that includes a HtmlGenericControl. The control is being added, but when I try to access the control's FindControl it returns null. I can access the control's InnerText by using this.Parent.Controls.OfType().First() but cannot access its properties such as InnerText. How can I access a control's InnerText property when it is contained in a HtmlGenericControl. A: The HtmlGenericControl is not the control itself, the control you want to access is a WebControl, so, you can get the innerText of the control you want to access, using GetType().GetProperty("InnerText").GetValue(): HtmlGenericControl genericControl = (HtmlGenericControl)HtmlGenericControl.InnerHtml; string innerText = ((WebControl)genericControl).GetType().GetProperty("InnerText").GetValue(genericControl); EDIT: If you're adding the control dynamically, you can try something like this. HtmlGenericControl ctrl = new HtmlGenericControl(); ctrl.ID = "CustomControlID"; HtmlGenericControl control = (HtmlGenericControl)ctrl.Nodes.First(); string innerText = control.GetType().GetProperty("InnerText").GetValue(control, null); The added node will have the same "type" as the root node, and therefore the property from ctrl will be available to it. (Thinkstock) Two men were arrested in New York City after they allegedly stole a Dodge Challenger worth \$50,000 and then crashed it into the back of a police car at a Coney Island parking garage, according to reports. Santos Reyes, 26, and Ismael Suarez, 30, were arrested Saturday night at a parking garage at Surf Avenue and West 18th Street. Surf Avenue was closed for about two hours between West 18th Street and West 16th Street as police processed the area, the NYPD said. The drivers crashed the Dodge Challenger into a police vehicle before causing the unattended police car to catch fire, the NYPD said. The suspects were arrested after the police car was towed from the scene, according to the

Q: String split in java I want to split string by space. but split(" ") throws exception. my String is not comma separated. please help String str="name id"; String []temp=str.split(" "); A: You can use regex to do this, and you don't need to split it. Your regex will look like this: \s+ This will split the string on any number of whitespace characters, or one whitespace character followed by any number of other characters. See it in action: String str="name id"; String regex = "\s+"; String []temp = str.split(regex); Q: json.dumps(), how to write generic classes? So, I have a generic class, say MyClass. It has a member field called value, of type int. class MyClass: def \_\_init\_\_(self, value): self.value = value def \_\_repr\_\_(self): return "%s(%r)" % (self.\_\_class\_\_.\_\_name\_\_, self.value) The MyClass is used in many places to store information, but all values of my classes have the same type. A good use case of MyClass is that of a transformation algorithm. class Trans(object): """This class does somethings. It can be used to store values inside MyClass instances.""" def \_\_init\_\_(self): self.obj = MyClass(100) def transform(self, values): # Transforms data inside the object for value in values: self.obj.value = some\_procedure(value) class AnotherClass(object): def \_\_init\_\_(self, obj): self.obj = MyClass(10) self.stuff = ["one", "two"]
