Bibloscape.9.0.with.Serial

-----BEGIN PGP SIGNATURE----- Version: GnuPG v1.4.12 (GNU/Linux) Comment: Using GnuPG with Mozilla - iD8DBQFGKdrbrdY3Z8nAALwRAiIYTReEfxuHYZk84wA9iFa7u1oUHnf/S2Tx9Y kk0kVyb2c/CoipEZsP+F4BAbWzbgm= =mc1o6 -----END PGP SIGNATURE----- A: bibloscape is a command-line program using the \$ prompt, so if you start it on your computer, this would happen: \$ bibloscape.9.0.with.Serial Cannot open output file: Bibloscape.9.0.with.Serial Cannot open input file: Serial What is happening is that \$bibloscape.9.0.with.Serial is expanded before the shell tries to run it. You can tell bash to handle the expansion for you instead of performing it as it would normally: sh -c 'bibloscape.9.0.with.Serial' Update: You can get bibloscape.9.0.with.Serial to execute from the command-line by prepending the expansion with () as follows: \$ bibloscape.9.0.with.Serial () bibloscape.9.0.with.Serial: command not found To do this, you have to first install bash-completion if it's not already installed and then enter source ~/.bash_profile at the command-line. Q: python - re.sub example won't recognize substitution I have an assignment in Python where I have to parse a .log file, and then make basic changes to the source. I need to replace a string with another string, so I used the re.sub() method. The problem is that re.sub() isn't working with the example script that was provided. I've tried to modify the script to my own script, and I can't get it to work. I'm sorry if this is a silly question, but what am I doing wrong? Here is the relevant
